The Muses were originally the nymphs of inspiring springs; then, goddesses of inspiration. According to Hesiod, they are the nine daughters of Zeus and Mnemosyne, born in Pieria and occupied in Olympus as attendants of Apollo, who in his capacity as their leader is called *Musagetes*. At a comparatively late date their names and attributions were differentiated, and became fixed as follows: Calliope, Muse of epic poetry; Clio, of history; Euterpe, of lyric poetry; Thalia, of comedy and bucolic poetry; Melpomene, of tragedy; Terpsichore, of dancing; Erato, of erotic poetry; Polymnia, or Polyhymnia, of serious sacred song; and Urania, of astronomy. Their favorite haunts were the sacred springs of Castalia, at the foot of Mt. Parnassus, and Aganippe and Hippocrene on Helicon. The Roman poets identified them with the Camenæ, prophetic nymphs of springs and goddesses of birth. See EGERIA.

N

N n N n S n

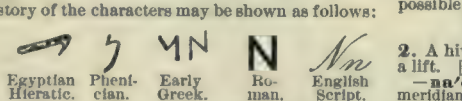
Roman. Black Letter. Script.

N, n, en, *n.* [ENS, N's, or Ns, enz, *pl.*] **1.** A letter: the fourteenth in the English alphabet; in Bell's "Visible Speech," ⓝ: the sign of vocal resonance in the nose with tongue-front closure as in *-on*, or tongue-front opening as in *no*, often syllabic as in *kitten* = kit'n, *lesson* = les'n, *swell'n*. It is called a nasal, a lingual, a linguinasal, a dentinasal, a continuous consonant, a liquid, sometimes a semi-vowel.

Similar tongue-movements, with the nose closed, make *d*, or, if the vocal cords are separated, *t*, so that *n*, especially opening *n*, easily changes to *d* before *l* or *r*, as *spin(n)el* to *spindle*, or to *t* when final, as *tyran(n)-* to *tyrant*; and *n* before other linguals, *d*, *t*, *l*, *r*, *s*, may assimilate, as *illiberal* < *in* = *liberal*, *irregular* < *in* + *regular*, and drop with compensative lengthening of the preceding vowel, as in *spau-ner* > *spinder* > *spidder* > *spider*, *gans* (< *gand-*) > *goose*. Slighter assimilations in sound before *ch* = *tsh*, *j-dzh*, as in *lunch*, *hinge*, are not represented in the English alphabet. *N* before a labial freely changes to *m*, the labial nasal, as *implant* < *in* + *plant*; before a palatal to ŋ = ng, the palatal nasal, as *ink* = *ingk* < *in* + *k(austos)*, burnt in.

N is one of the most stable of letters when initial, but medial and final it is comparable with *r* and *s* in the freedom of its changes. It is printed in a few words in which it has become silent, as *damn*, *kiln*, *column*.

In the Indo-European languages it is prominent in inflection endings and particles of emphasis and negation.



n. in this Dictionary marked n, is used in French, and in the transliteration of Sanskrit and some other languages, as a sign that the vowel before it is uttered with nasal resonance. In transliteration of Chinese *ng* is often used with this meaning.

ng, ŋ. In this Dictionary, as in Latin and Anglo-Saxon, **ng** = **ŋ** are used as the sign of vocal resonance in the nose with back tongue-closure, the palatal nasal, in Bell's "Visible Speech" ⓝ; Latin *lingua* = ling'gua *or* liŋ'gwa, Anglo-Saxon *Englisc* = Eng'glisc *or* En'glisc, so in English *linger*, *longer*, *think* = thiŋk *or* think. This sound does not appear initially, and is the 32d letter in frequency in English literature, averaging .79 per cent., the same as the palatal mute, *g*. Compare G.

As the tongue-front moves most easily, lingual *n* is the most frequent of the nasals, and next to the most frequent of all the letters, averaging 6.76 per cent. of the letters on the pages of English literature as examined by Prof. W. D. Whitney. See WHITNEY *Oriental and Linguistic Studies* second series, p, 274. [s. '74.]

Capital N is from Latin, Greek N < Early Greek, Latin N 𐤍 < Phenician 𐤍 < hieratic 𓈖 < hieroglyph 𓈖. The hieroglyph is a water-line, the Phenician name is *nun*, a fish, whence Greek *nu;* from Latin *en* comes the English name. The Anglo-Saxon letter was ᚾ, named *nēd*, need, the 10th in the futhorc; ŋ, ng, ᛝ, called *ing*, is the 22d. For lower case, black letter, dates, and the like, see A.

Specifically: (1) The distinctive appellation by which a person or thing is designated or known; denomination; as, a personal or proper *name* (proper noun); a general or common *name* (common noun).

In civilized lands most persons have one or more Christian, given, or personal names, and a family name or surname. Among the Romans the *prænomen* was the individual part of a man's name, the *nomen* designated the gens to which he belonged, the *cognomen* showed his family and was borne by all patricians, and the *agnomen* was added to refer to his achievements or character. When scientists name an animal or a plant, they give it a binary or binomial technical name comprising a generic and a specific appellation. See DENOMINATION.

The days of the week . . . received the *names* of the sun and moon and five planets, which have been retained to the present day. RAWLINSON *Herodotus* vol. ii, bk. ii, p. 115, note. [A. '85.]

3. That which is commonly said or thought of a person or thing; general reputation or estimation; honorable character or estimation; eminence; honor; fame.

Synonyms: appellation, cognomen, denomination, designation, epithet, style, title. *Name* in the most general sense includes all other words of this group; in the more limited sense a *name* is personal, an *appellation* is descriptive, a *title* is official. In the phrase William the Conqueror, King of England, William is the man's *name*, which belongs to him personally, independently of any rank or achievement; Conqueror is the *appellation* which he won by his acquisition of England; King is the *title* denoting his royal rank. An *epithet* is by derivation something placed upon a person or thing; the *epithet* does not strictly belong

to an object like a *name*, but is given to mark some assumed characteristic, good or bad, now usually the latter. *Designatum* may be used much in the sense of *appellatum*, but is far broader and more general in meaning; a *designation* properly so called rests upon some inherent quality, while an *appellation* may be fanciful. One's personal *name*, as John or Mary, is given in infancy, and is often called the given *name* or Christian *name*, or simply the first *name*; the *cognomen* or *surname* is the family *name* which belongs to one by right of birth or marriage. *Style* is the legal *designation* by which a person or house is known in official or business relations; as, the *name* and *style* of Baring Brothers. The term *denomination* is applied to a separate religious organization, without the opprobrious meaning attaching to the word *sect*. The term is used also to designate any class of like objects collectively, especially money or notes of a certain value; as, the sum was in notes of the *denomination* of one thousand dollars.

W.*² *Wr.*) (XIII), *n.* A light, colorless, volatile, inflammable oil distilled from organic bodies, as bituminous shale, asphalt minerals, etc., but principally from petroleum, having an average specific gravity of .885, used as a solvent, as in the manufacture of paints, varnishes, etc., and as a burning-fluid for illumination, etc.

Originally naphtha was the more volatile constituent of asphalt and bitumen, and was known to the ancient Egyptians, who used it in their perpetual lamps. With the growth of chemistry the name was applied to a number of volatile, mobile, strong-smelling inflammable liquids, chiefly ethers, as **naphtha vitrioli** (sulfuric ether), and at present it is sometimes loosely applied to any liquid hydrocarbon, natural petroleum, or some of its volatile products.

Some varieties of naphtha are named from the substance from which they are derived; as, **caoutchouc-naphtha** (obtained by the dry distillation of crude india-rubber), **coal-n.** (distilled from rich bituminous coals, as albertite or grahamite), **coal-tar n.** (the volatile mixture distilled from coal-tar, containing benzene, toluene, xylene, and similar hydrocarbons), **mineral n.** (same as PETROLEUM), **petroleum-n.** (the more volatile portion of petroleum, which is collected separately during the distillation, and sold as *crude naphtha*, or again separated by distillation into gasoline, refined naphtha, and benzene), **shale-n.** (distilled from bituminous shales or schists), **wood-n.** (same as METHYL ALCOHOL).

Pliny mentions the oil of a spring at Agrigentum, Sicily, and states that it was collected and used for burning in lamps, as a substitute for oil. He distinguishes this oil from *naphtha*, which he says was too light and inflammable for such a use. Of *naphtha*, he mentions a locality in 'Parthia' (about the sources of the Indus).

John Stuart Mill suggested *determinism* as a substitute for *necessarianism*, and it has been very generally adopted.

It is useless to try to minimize the doctrine [of philosophical determinism]; it is *necessarianism* pure and simple. Man is governed by motives, and these are not of his own making. L. F. STEARNS *Evidence of Christian Experience* lect. iii, p. 86. [S. '90.]

ne-ces′sism† [Rare]; **ne-ces″si-ta′ri-an-ism‡**.

nec′es-sa-ry, nes′es-ę-ri *or* -ē′ri, *a.* **1.** Being such in its nature, conditions, or relations that it must exist, occur, or be true or accepted as true; subject to necessity or the law of necessity; that can not be otherwise; impossible to avoid; inevitable; as, a *necessary* event; a *necessary* inference. **2.** Indispensably requisite or absolutely needed to accomplish a desired result; essential; requisite; as, health is *necessary* to the best work.

Touch, as it is the sense that is most *necessary* to animal existence, . . . is enjoyed by all animals from the lowest to the highest in the chain of existence. CHAS. BELL *The Hand* ch. 8, p. 136. [H. '40.]

3. Resulting from external or physical causes, or from determinism; compulsory; not of free device; involuntary; as, a *necessary* action is one the contrary of which is physically impossible. **4.** Being such that it must be believed; necessitated by the constitution of mind; transcendental; intuitive; as, a *necessary* idea is one the contrary of which can not be entertained by the mind.

The ideas of space and time are called in philosophy *necessary* ideas. J. COOK *Transcendentalism* lect. i, p. 16. [H. M. & CO. '82.]

[< OF. *necessaire*, < L. *necessarius*, < *necesse*, perhaps < *ne*, not, + *cessus*, pp. of *cedo*, yield.] **nec′es-sa-rie†**.

Synonyms: essential, indispensable, inevitable, needed, needful, required, requisite, unavoidable, undeniable. That which is *essential* belongs to the essence of a thing, so that the thing can not exist in its completeness without it; that which is *indispensable* may be only an adjunct, but it is one that can not be spared; vigorous health is *essential* to an arctic explorer; warm clothing is *indispensable*. That which is *requisite* (or required) is so in the judgment of the person requiring it, but not absolutely; thus the *requisite* is more a matter of personal feeling than the *indispensable*. *Inevitable* and *unavoidable* are applied to things which some at least would escape or prevent, while that which is *necessary* may meet with no objection; food is *necessary*, death is *inevitable*; a *necessary* conclusion satisfies a thinker; an *inevitable* conclusion silences opposition. *Needed* and *needful* are more concrete than *necessary*, and respect an end to be attained, while *necessary* may apply simply to what exists; we speak of a *necessary* inference; *necessary* food is what one can not live without, while *needful* food is that without which he can not enjoy comfort, health, and strength.—**Antonyms:** casual, contingent, needless, non-essential, optional, unnecessary, useless, worthless.—**Prepositions:** necessary *to* a sequence or a total; *for* or *to* a result or a person; unity is necessary *to*

(to constitute) completeness; decision is necessary *for* command, or *for* a commander.

The word *necessaries* is a flexible term in the law, not absolute. It has relation in each case to the person's financial and social condition in life, and not merely to such things as are needful to sustain life.

Buy what thou hast no need of, and ere long thou shalt sell thy *necessaries*. B. FRANKLIN *Sayings of Poor Richard, Almanac, 1758* p. 83. (G. P. P. '90.)

There is in it the family' a mysterious element of *necessity*. Every one is born into a particular family, which has a history and character of its own, formed before he arrives.
JAMES STALKER *Imago Christi* ch. 2, p. 37. [A. T. S.]

2. That which is unavoidable or necessary, as in physical, moral, or logical sequence; what can not be escaped, or a state of things rendering something inevitable; as, to feel or see a *necessity*.

There is a whole universe between mechanical *necessity* and ethical *necessity*.
W. S. LILLY *Right and Wrong* ch. 2, p. 52. [C. & H. '90.]

3. That which is indispensably requisite to an end desired; an essential requisite; as, a *necessity* to success; the *necessities* of life. **4.** The condition of being in want; poverty; need; as, to be reduced to *necessity*. **5.** *Philos.* The doctrine that all events, including the voluntary actions of men, are necessarily determined; fatalism. It embraces (1) physical determinism, necessarianism, or fatalism, and (2) philosophical or rational determinism, or certainty.

There are two schemes of *necessity*,—the necessitation by efficient, the necessitation by final causes. The former is brute or blind fate, the latter is rational determinism.
K.-F. *Vocab. Philos.* p. 343. [SH. & CO. '78.]

The doctrine of *necessity* has been, in all ages of the world, the great stronghold of atheism.

Eng.] Bad illicit spirits. **8**†. Something needful to do; business. [< F. *nécessité*, < L. *necessitat-is*, < *necesse;* see NECESSARY, *a.*] **ne-ces'si-tee**†; **ne-ces'si-tie**†.

Synonyms: compulsion, destiny, emergency, exigency, extremity, fatality, fate, indispensability, indispensableness, need, requirement, requisite, sine qua non, unavoidableness, urgency, want. *Need* and *want* always imply a lack; *necessity* may be used in this sense, but in the higher philosophical sense *necessity* simply denotes the exclusion of any alternative either in thought or fact; righteousness is a *necessity*, not a *need*, of the divine nature. *Need* suggests the possibility of supplying the deficiency which *want* expresses, to speak of a person's *want* of decision merely points out a weakness in his character; to say that he has *need* of decision implies that he can exercise or attain it. As applied to a deficiency, *necessity* is more imperative than *need*. A weary person is in *need* of rest; when rest becomes a *necessity* he has no choice but to stop work. See PREDESTINATION. Compare synonyms for NECESSARY. — Antonyms: choice, contingency, doubt, doubtfulness, dubiousness, fortuity, freedom, option, possibility, uncertainty. — Prepositions: the necessity *of* surrender; a necessity *for* action; this is a necessity *to* me.

Ne″o-pla′to-nism, nĭ″o-plā′to-nizm, *n.* *Ch. Hist.* A system of philosophy originating with Ammonius Saccus of Alexandria in the 3d century, through the commingling of Jewish and Christian ideas with Greek philosophy and Oriental mysticism, and taught subsequently by Plotinus, Porphyry, and others. It assumed various forms, but its chief features were dualism (including the doctrine that matter is essentially evil), the emanation of all ideas from the reason of God, the affinity of human with divine reason, redemption by emancipation from matter, and the final absorption of the human in the divine reason by continuous contemplation.

Although, under Porphyry, *neo-platonism* became the avowed antagonist of Christianity, there was much in its elevated mysticism which was captivating to the fervor of proselytes; and the ascetism which it inculcated may fairly be assumed as inflaming the emulation of those who were already predisposed to regard the mortification of the flesh as a means of raising the spirit to God.

It prevailed from 1860 to 1870. (2) More recently, a kind of revolutionism; Russian anarchism; a movement bent on the overthrow of existing institutions.

As a revolutionary movement it took form especially about 1872 under Bakounin, calling on the peasants to revolt, demanding constitutional reforms, and culminating in the assassination of the Czar Alexander II. by bombs, March 13, 1881. Other assassinations have followed intermittently. In general the movement looks forward to no reconstruction of society, or to none except such as may spontaneously take place after the destruction of present forms. Doctrinal anarchists speak of nihilism as a condition precedent to anarchy, which they define as individual self-government, without other government.

Nihilism is the evidence of a spirit of unrest, dissatisfaction, and revolution among the Russians, who see all nations around them free, while they themselves are still kept in the bondage of a dreary absolutism. H. BUTTERWORTH *Zigzag Journeys in Orient* ch. 10, p. 204. [E. & L.]

The French and the oldest English examples differ but little from those of other contemporaneous Romanesque styles, leading characteristics being the round arch and barrel vault and massiveness of construction. The later tendency of the style in England exhibits a certain degeneracy, as in the preference of wooden roofs to vaulting and the persistence of certain rather rude types of mouldings, as the dog-tooth, though many English buildings in this style are very rich and impressive in effect. Castles almost innumerable were built in this style in both Normandy and England. See ENGLISH ARCHITECTURE, under ENGLISH, and also illus. below.—**N. E. B. TYLOR *Anthropology* ch. 1, p. 18. [A. '81.]

See note and table below. **3**†. Etymological meaning. [< L. *notatio(n-)*, < *nota;* see NOTE[1], *n.*]

The arithmetical notations now in use are the *Arabic*, employing the nine digits and the cipher (1, 2, 3, 4, 5, 6, 7, 8, 9, 0), which were introduced from an Arabic work into Europe in the 12th century, and the *Roman*, using letters of the alphabet. The former is universally employed in calculation, because it is based on the decimal system. In it the value of any symbol depends on its *place* — that is, on the number of symbols to the right — the original value being multiplied by a power of ten whose exponent equals that number. In the Roman notation, when the symbol of a smaller number precedes that of a larger it denotes subtraction: when it follows, addition. A symbol following one of equal value is to be added, and a smaller one between two larger is to be subtracted from their sum. A horizontal line above a letter multiplies its value by 1,000. A modern scientific notation for very high numbers, especially when ending in many ciphers, is to denote them by using ten with an exponent. Thus, 10^{12} is written instead of 1,000,000,000,000; $10^{2.5644}$ = 361 instead of 2,610,000,000,000,000,000; 10^{-9} instead of .000,000,001. Compare NUMERATION, ZERO.

O

Roman. Black Letter. Phil. Soc. Script.

O1, **o**, ō, *n.* [OES, O's, *or* Os, ōz, *pl.*] **1.** A letter: the fifteenth in the English alphabet; in Bell's "Visible Speech," **ɔ**; the sign of mid-back rounded vowel sound, simple as in *obey*, or prolonged as in *no*.

In making *o* sounds the tongue lies naturally with its back raised to middle height, and the lips are rounded. If the tongue is raised higher, ō shades into u, o͝o, as in *full, fōōl*, and, the lips closing to a buzz, into *u*; if the tongue is lowered, *o* changes into ô, *o* as in *nôr, not*, and, the lips being unrounded, into ą in *father*, or, without resonance, into ŭ as in *ŭpon*.

A Parent Speech root "o," taking various relations to accent and rounding, may appear as any of these *o* sounds; so may root "u." And since "o" weakens also into *u*, *e*, *i* (see A), these sounds are found apparently interchangeable with *o* sounde *sell, sold* < *s sal; sing, song* < *s sang*. So from other variations: *rise, rose, lend, loan*, etc. Anglo-Saxon ō accented regularly becomes o͞o in modern English: Anglo-Saxon *gōd* > *goo*; Anglo-Saxon ō becomes ū in sound: Anglo-Saxon *mōnat* > moon = mūn.

This set of sounds (ō, o, ô, *o*) have only gradually been distinguished in Indo-European alphabets. In Sanskrit, root *a* is in inflection opened by the accent into ō which has its special letter, but roundings of ą as in *what, all* are not distinguished in writing from ą as in *father*. The sound of *o* as in *not, what* is much nearer to ą than to ō, but as ą shaded to *o*, ô, as in *nanny, fatte* : see A, the rounded ą's as in *what* were united with the *o*'s in Greek, and they are all denoted by the same letter in Latin, Italian, and English.

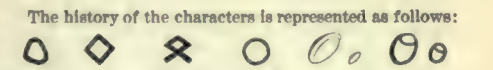
In the scientific alphabet used in the pronunciation of this Dictionary, *o*, ô are used for the sounds nearest to ŭ, and *o*, ō for those nearest to ą.

Elementary o, as in *obey*, is not recognized as standard English in any accented syllables. It occurs abundantly in the older English and in dialects, as in the New England *whole, home*, etc., but in most words it has lost its resonance and has the sound of u, o͝o, as in *oven, word*, or has strengthened into o, ō, or ō, as in *of, for, over*. Silent *o* is wrongly written in a few words: *jeopard, leopard, people*.

Long o narrows as it is prolonged, and ends in an u = oo vanish which in Southern English is diphthongal, "Visible Speech" **ɔʊ**, and often written ow as in *low*, or oa as in *moan*, sometimes o͞e as in *toe*. **oo** regularly = o͞o, u as in *moon, book*, or, without resonance, ŭ as in *flood*. **o͞, ou** sometimes = o͞, u, as in *do, wolf, through, could*.

Θ, o, ð. [ŌES, O's, *or* Ōs, ðz, *pl.*] The seventeenth letter (nineteenth sound) in the Spelling Reform alphabet; in Bell's "Visible Speech," **ʒ**; the sign of rounded vowel-sound (low and back in the mouth), simple as in *not, what*, or prolonged as in *nor, naught*.

Short o is often the rounding of an earlier ą by an adjacent labial or nasal (*w, u* < *l, n*): *what, salt, quality, quantity, long* < *lang*.



Long ō is sometimes a labial assimilation from ą by *w*, as *draw, warm*, by *l* as *fall, hall*, sometimes an accentual opening of ō by *r* as *forty, broad*. In London ôr is heard in many words, which in standard English are ōr, as *hoarse* and *horse*, both alike pronounced hôs.

The diphthongs **oi, oy** sound as ôi: *voice, boy;* **ou, ow** = au: *loud, now*, or ō: *cough*, or u: *tough*.

Prof Whitney finds the following percentages of the *o* sounds in English literature: o, 08; ō, 1.76; o, 2.59; ô, 1.54; oi, .12. W. D WHITNEY *Oriental and Linguistic Studies* second series, p. 274. [S. '74.]

Capital O is from Greek, Latin O < earlier ◇ < Phenician ◇ (a guttural sound), not identified with any hieroglyph. In early English MS. o < ą sometimes has a diacritic, as ǫ, whence ø. The Phenician name seems to mean *eye;* the Anglo-Saxon is *oethel*, home; the Greek, Latin, round form and the name go with the rounding of the mouth in making the sound.

The history of the characters is represented as follows:

Phenician. Early Greek. Anglo-Saxon Rune. Greek, Latin. Script for O o. Script for Θ o.

2. Anything shaped like the letter O; an oval or circle; a spot or spangle; as, "Giotto's *O*." **3.** An abbreviation. O3, *n.* An exclamation or lamentation. [< O, *interj.*]

o†, *a.* One; a single.

o, o. *prep.* Of; on; as, one *o'*clock; *o'* the port side. [Abbr. of OF, ON, *prep.*]

O, ō, *interj.* **1.** An exclamation prefixed to an expression of address, as a sign of the vocative, or case of address, used especially in earnest or solemn appeal or exhortation, or as a reverential expression in prayer to the Deity, to emphasize the feeling or passion conveyed by the words. A note of exclamation usually follows the vocative word, phrase, or clause; as, *O* Lord! *O* my countrymen! *O* blessed Spirit, who hearest prayer! **2.** An ejaculation expressive of a wish: an elliptical form; as, *O*, stay! The object of desire sometimes follows in an interjectional or elliptical phrase, being joined to *O* by

for, if expressed by a substantive, or by *that* when expressed in a subjunctive clause; as, *O for* rest and peace! *O that* the day would come!

3. Same as OH. The forms *O* and *oh* are often used indiscriminately. It seems, however, to be very generally conceded that the proper form in the vocative use is *O*.

Between the interjections *O* and oh there exists an essential difference, which is frequently neglected even by some of our best writers. The former is properly prefixed to an expression in a direct address; but the latter ought never to be so employed. *O* should be used without the mark of exclamation immediately after it; but oh, sometimes with and sometimes without it, according to the construction and sense of the passage in which the word occurs.

ode, ōd, *n.* **1.** The form of lyric poetry anciently intended to be sung; a dithyramb characterized by exalted feeling, dignity of theme, and complicated structure; sometimes, also, the music for an ode. See LYRIC.

In ancient Greek the ode embraced the choral songs and other lyrics in tragedy and comedy. Its principal forms were (1) the *monody* (which see), recited by the actors; (2) the *parode*, the *strophe*, and the *parabasis* (which see), recited by the choreutæ, or members of the chorus; (3) the *kommos* (a wild lament for the dead), sung alternately by one or more of the chief actors and the chorus. Compare CHORAL ODE.

Of the *odes* which they recited, the first was called the parode, the others the stasima. . . . The *odes* which were sung partly by the actors and partly by the chorus, were called kommoi. . . . Of those parts which fell to the lot of the dramatis personæ, the *odes* sung by them alone were called monodies.

oil, *n.* A neutral liquid, usually of either vegetable or animal origin, but sometimes of mineral origin, that is insoluble in water, but sometimes soluble in alcohol, and always in ether. **Vegetable** and **animal oils** are divided according to their properties into *fatty* or *fixed oils*, and *volatile* or *essential oils*. **Fatty oils** are characterized by ability to communicate to paper and like substances a permanent translucent grease-spot. Those of vegetable origin are obtained chiefly from seeds by pressure, but animal oils are simply the liquid portion of animal fat. In composition the fatty oils are glycerids of stearic, palmitic, and oleic acids. Those fatty oils that slowly absorb oxygen from the air, forming a varnish, are termed **drying** or **siccative oils**, and are used in manufacturing paints, etc. Those that decompose on exposure to the air are termed **non-drying oils**, and are used in soap-making, as food, in medicine, etc. **Essential oils** are chiefly the volatile principles of plants, and are used in perfumery and medicine. Chemically they are composed of hydrocarbons or mixtures of hydrocarbons with compounds of carbon, hydrogen, and oxygen. **Mineral oils** form a class somewhat by themselves, and include petroleum, and oils distilled from peat, shale, etc. They are generally thought to have been formed by the decomposition of animal and vegetable remains, although petroleum is regarded by certain writers, as Mendelejeff, as of purely mineral origin.

Oils are often named according to their uses; as, **hair-oil, lubricating-oil, salad-oil**; also according to their method of manufacture; as, **expressed oils** when obtained by pressure (**cold-expressed** when the operation is performed at ordinary temperature, and **hot-expressed** when heat is employed, the residue being called

oilcake). **Cold-drawn oil** is the result of the first expression without the aid of heat — the first quality of most expressed oils. See table below.

o"le-o-mar'ga-rin, } ō"lē-o-mär'ga-rin (XIII), *n.* Ar-
o"le-o-mar'ga-rine, } tificial butter, originally made from pure beef-fat, but now manufactured from oleo-oil, neutral lard, milk, cream, and pure butter, worked together, with a coloring-matter: formerly distinguished

from *butterin*, as containing no lard, but now the same ingredients are used in both. *Oleomargarin* is the name by which the United States government recognizes the product. **but'ter-in‡; o'le-o‡; sue'in‡.**

The process for the manufacture of oleomargarin-butter as patented in France by M. Hippolyte Mège and subsequently introduced into this country consists in taking the purest fresh beef suet, and carefully washing the same with ice-cold water, after which it is cut as fine as possible by machinery. It is then placed in large vats of water heated by steam to 125° or 130° F. and stirred for several hours to separate the membrane of the fat cells from the melted fat. After which it is allowed to rest while kept warm for two hours, during which the fine particles of membrane settle and the fat floats as an oil. It is drawn off into a second vat and allowed to solidify. It is demembranized fat. Portions of this mass, about three pounds in weight, are wrapped in clean cloths, piled on each other, and subjected to pressure. The expressed oleomargarin is then churned with water or milk, salted, and sometimes slightly colored. R. OGDEN DOREMUS *Letter to Standard Dict.* Feb. 27, '94.

It may be safely said that all *oleomargarine* is made from oleo-oil, neutral lard, milk and cream, and pure butter, although pure butter is not used in all grades. Oleo-oil is made from the selected fat of the steer, and neutral lard is made from the leaf lard of the hog, these fats, therefore, are the very finest obtainable, and after the animal heat is removed they are placed in a bath of cold water, then washed and the fibrine and tissue removed, then after being reduced to liquid form they are churned with milk and cream and coloring-matter, such as is used in coloring pure butter, and a considerable percentage of the very finest pure butter is also added, the quantity of butter depending upon the grade of butterine and flavor desired, after churning, the goods are worked and packed the same as pure butter. ARMOUR & CO. *Letter to Standard Dict.* Apr. 10, '91.

Organ-pipes are of two types: (1) *flue-pipes*, in which the vibration is induced by a fluttering current of air entering through a crack and impinging on a sharp edge; and (2) *reed-pipes*, in which a vibrating reed sets the air in motion. From the former, which may be *open* or *stopped*, are obtained the characteristic organ-tone, the flute-tone, and the string-tone.—**o.-pipe coral,** a tubiporoid coral consisting of cylindrical tubes placed side by side and united by horizontal floor-like expansions.—**o.-point,** *n.* A passage in which the tonic or dominant (sometimes both) is prolonged by the bass, while other parts move without apparent reference to it.—**o.-screen,** *n.* In cathedrals or great churches, a screen or partition on one side, or in England at the western end of the choir, built of wood or stone highly ornamented, and supporting an organ, often a secondary organ.—**o.-stop,** *n.* A stop of an organ. ASA GRAY *Field-Book of Botany* lesson i, p. 1. [I. B. & CO. '68.]

(2) Of, pertaining to, or affecting an organ or organs; as,

organic diseases. (3) Serving the purpose of an organ. **2.** *Chem.* Containing carbon as an essential ingredient: originally confined to carbon compounds in organisms.

At first the term *organic* was applied only to compounds whose formation was supposed to be due to vital force, and it was so used until 1828, when Wöhler artificially prepared urea, a distinct product of animal life. The term has continued to expand in its meaning until at present any line of demarcation between organic and inorganic compounds is arbitrary rather than natural.

A useful practical distinction between *organic* and inorganic substances is afforded by their behaviour when heated. An *organic* substance is either converted into vapour when moderately heated, or is decomposed into volatile products, generally leaving a residue of charcoal, which burns away when heated in air.

C. L. BLOXAM *Chemistry* ¶ 314, p. 468. [P. B. & CO. '90.]

3. Forming or belonging to a system or organized whole; characterized by correlation and cooperation of parts; organized; systematized.

Society is many and is one, and the *organic* unity of the state is to be regarded with the separate existence of each of its members. BANCROFT *United States* vol. v, ch. 48, p. 70. [L. B. & CO.]

4. Acting as a means or instrument of formation; constitutive; regulative; as, the constitution is the *organic* law of the state. **5.** Characterized by laws like those of life, not mechanical; as, social progress is *organic*. **6.** *Philol.* Depending on structure; fundamental; not accidental or fortuitous; as, *organic* growth or development.

This . . . is what is meant by the phrases 'organic growth, organic development,' as applied to language. A language, like an *organic* body, is no mere aggregate of similar particles; it is a complex of related and mutually helpful parts. W. D. WHITNEY *Lang and Study of Lang.* lect. ii, p. 46. [S. '74.]

Apparatus for Organic Analysis.

1 Gasometer with regulator, containing compressed oxygen. 2, Apparatus for drying and purifying oxygen and air, consisting of jars and tubes containing fragments of potassium hydroxid and calcium chlorid. 3, Combustion-tube in combustion-furnace. 4, Carbon-collecting tube, used for collecting the hydrogen (as water) to be weighed. 5, Potash-bulb containing a solution of potassium hydroxid, used for collecting the carbon (as carbon dioxid) to be weighed: *a*, Liebig's form; *b*, Geissler's form with drying-tube, with a guard-tube *b'* containing calcium chlorid for absorbing any escaping moisture from the potash-bulb. 7, Tube containing calcium chlorid for the absorption of any moisture liable to go back from the aspirator. 8, Aspirator for drawing air through the apparatus after the combustion has been completed.

taining carbon, hydrogen, and oxygen, and occasionally nitrogen, by oxidizing the compound with oxygen from red-hot cupric oxid, sometimes aided by a current of pure oxygen, so that the hydrogen is oxidized to hydrogen monoxid (H_2O) and the carbon to carbon dioxid (CO_2), while the nitrogen, when present, may be estimated as a gas or in combination with hydrogen as ammonia (NH_3). When sulfur and phosphorus are present, they are oxidized into sulfuric and phosphoric acids and determined as such. If the compound be such a one as starch or sugar, it is thoroughly dried and then weighed in a vessel of platinum or porcelain, called a boat, which is placed in a hard glass (Bohemian) or porcelain tube, the remaining portion of which is packed with cupric oxid. The various parts of the apparatus indicated in the illustration are then connected. The cupric oxid is first made red-hot by the burners of the furnace 3b. Then the compound is heated and oxidized by the oxygen from the gasometer 1, after its passage through the purifying-apparatus 2. Further passage of the material through the red-hot cupric oxid insures its complete oxidation. The hydrogen of the compound having thus been converted into hydrogen monoxid (H_2O), it is absorbed in the weighed tube 4 containing calcium chlorid, which is reweighed after the combustion, and from its increase the proportion of hydrogen is estimated. The carbon is converted into carbon dioxid (CO_2), which passes to the potash-bulb 5*b* and its guard-tube 5*b'* containing calcium chlorid previously weighed together, where it is absorbed. On the completion of the operation the oxygen is turned off and a current of purified air drawn through the combustion-tube by means of the aspirating-apparatus 7 and 8, when the absorption-apparatus 5*b* and 6 are weighed, and from the increase the amount of carbon is calculated. The difference between the combined weights of the carbon and hydrogen and the original weight gives the amount of oxygen. **o. chemistry**, the branch of chemistry that relates to carbon compounds. In general, solutions of crystalline substances, as salts, are subject to osmose, but those of colloids, or gummy bodies, are not. In osmose each liquid or gas passes through the partition into the other, but generally one (usually, but not always, the thinner or less concentrated) does so with greater rapidity than the other, so that there is soon a difference of pressure or of volume on the two sides. The more rapid passage is properly called **endosmose** and the slower **exosmose,** though these names are sometimes given respectively to inward and outward osmose without relation to the rapidity of the process. The phenomena of osmose play an important part in vital processes, in both animals and vegetables. They have given rise to a new theory of solution. See SOLUTION.

ox'y-gen, ox'i-jen, *n. Chem.* **1.** A colorless, tasteless, and inodorous gaseous element, the most abundant and important yet discovered.

The weight of the oxygen of the globe exceeds that of all other elements combined. It forms by weight about $^{3}/_{4}$ of the animal, $^{4}/_{5}$ of the vegetable, and $^{1}/_{2}$ of the mineral worlds, also $^{1}/_{5}$ by volume of the atmosphere and $^{8}/_{9}$ by weight of water. It unites with all elements except fluorin and bromin, forming with some acids, with others alkalis, and with others neutral substances; hence the name *oxygen* (acid-maker), given by Lavoisier, expresses but a small portion of its chemical relations. Artificial heat, light, electricity, and electromagnetism are produced largely by its aid, and all mechanical power obtained from combustion, whether through the medium of steam, of heated air, or of electricity, depends on oxidation. Its inhalation by human beings and animals is essential to life; hence it was formerly called *vital air*. It was once described as a "permanent gas"; but in 1877 it was liquefied by Cailletet in Paris and by Pictet in Geneva, under a pressure of 300 atmospheres, at the temperature of −130° C. It is claimed to have been discovered by Eck, of Sulzbach, in 1489, and by Mayow, of England, in 1674; but its importance in chemistry dates from its almost simultaneous but independent rediscovery by Priestley in England and Scheele in Sweden in 1774. We are indebted to Lavoisier for showing the relationship of oxygen to many elements.

Since the discovery of *oxygen* the civilised world has undergone a revolution in manners and customs. The knowledge of the composition of the atmosphere, of the solid crust of the earth, of water, and of their influence upon the life of plants and animals, was linked with that discovery. The successful pursuit of innumerable trades and manufactures, the profitable separation of metals from their ores, also stand in the closest connection therewith. It may well be said that the material prosperity of empires has increased manyfold since the time *oxygen* became known, and the fortune of every individual has been augmented in proportion.

oys'ter-farm"ing, *n.* The business of planting and cultivating seed-oysters. Oyster-farming was practised extensively by the Romans. In the United States the industry dates from about 1820. The ground to be cultivated is first thoroughly cleaned with dredges; shells, broken stone, or gravel being then laid as cultch, mature oysters are planted on this to the extent of about fifty bushels per acre. The ova from the female oyster, fertilized by the milt of the male, attach themselves to the cultch. The grounds are kept free from stars and other enemies by means of cotton mops attached to iron bars, dragged along the bottom. When the oysters are two or three years old they are transplanted into shallower or fresher waters, where they are fattened for market.

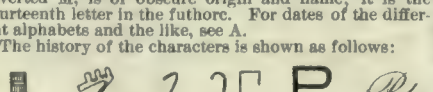
Roman.	Black Letter.	Script.
P p	𝔓 𝔭	𝒫 𝓅

P, p, pī. *n.* [PEES, P's, or *Ps,* pīz, *pl.*] **1.** A letter: the sixteenth in the English alphabet; in Bell's "Visible Speech," ᗡ: the sign of lip-closure, as in *ap,* or of lip-opening, as in *pa,* the vocal cords being open and the nose closed. It is called a labial, surd, non-vocal, or smooth, and a mute.

If the vocal cords are closed so as to vibrate, the same lip-movements give *b,* or, with the nose open, *m.* If the lower lip be closed to the upper teeth, *f* is made for *p, v* for *b.* For the historic relations of these letters, see B and F. The Anglo-Saxons originally used *f* in place of the Parent Speech *p.* The English words in *p* have been borrowed in late times mostly from Latin and Greek; Parent Speech *patēr* > Anglo-Saxon *fæder,* father. *Paternal, paternoster,* and the like are modern borrowings from Latin.

The sound of *p* (not *ph*) is constant; when it comes into unphonetic combinations, it assimilates other letters, as preterit *-ped* pronounced pt: *hoped* = hōpt; *ad* + *p, ob* + *p,* becoming *app, opp,* as in *appear, oppress;* or it is silent, as in Greek initial *pn, ps, pt,* in *pneumatic, psalm, Ptolemaic,* and a few other words. Gemination of *m* before a surd *s* or *t* gives *p: Thomsonson,* > Thompson; *Northamptonton,* > Northampton; *redemptionn.*



The Anglo-Saxons use few labial mutes, and *p* is a comparatively rare letter in literary English: for percentages, see F. Scientific terms are mostly from Greek or Latin, and *p,* beginning many prefixes, is the most frequent initial in the Greek dictionary, and nearly so in the Latin. In an English dictionary giving scientific terms freely the initial *p*'s, including *ph*'s, rank with the *c*'s, and outnumber all other letters but *s.*

Ph = f. < Greek *φ.*—In roots common to Greek and Latin, Greek *φ* = Latin *f; φύω* = *fu-i,* be; but borrowed Greek words were spelled *ph, p* + *h,* as in *up-hill,* being the Greek pronunciation. Fully Latinized words were pronounced with *f,* and their descendants are so written in Italian, Spanish, Swedish, Danish, and Russian. Such words, when naturalized in Early English, were written with *f;* Greek *φαντασία,* It. Sp. Pg. *fantasia,* Dan. Sw. *fantasi,* Old French, Early English *fantasie,* fancy; so *frantic, frenzy,* etc.

In the pronunciation of this Dictionary *f* is used throughout, but in the vocabulary both forms are given —*ph* as established in general use, *f* as recommended by the Philological Societies.

Capital P is from Latin P < Old Greek Ρ < 𐤓 (> Greek Π) < Phenician 𐤐 < hieratic 𓂝 < hieroglyph 𓉐. The hieroglyph is a shutter; the Phenician name is *pe,* mouth, > Greek *pi,* > Latin *pe,* > English *pe,* pī. The rare Anglo-Saxon rune *peordh,* looking somewhat like inverted M, is of obscure origin and name; it is the fourteenth letter in the futhorc. For dates of the different alphabets and the like, see A.

The history of the characters is shown as follows:

Soldiers are trained to a regulation pace; in the United States army it is 30 inches for quick time, the cadence being at the rate of 120 steps a minute, and 36 inches in double time, the cadence being 180 steps a minute; in the British army the step and cadence for quick time are the same as those defined above, and for double time 33 inches, and 175 steps a minute. See MEASURE.

2. A conventional measure of length approximating the average length of stride in walking; a regular and even stride acquired by practise for measuring land.

The pace is measured from the heel of one foot to that of the other. The usual length is a yard, or 3 feet, though sometimes it is 3.3 feet, making 5 paces to the rod. The Roman pace was measured from the point where the heel of one foot left the ground to the point where it descended in the next stride, and was 5 Roman feet, equal to about 58.1 inches, a thousand such double strides making a mile. Such a double step is now called a *geometrical pace*, reckoned by some at 5 and by others at 4.6 feet. See MEASURE.

3. The mode, manner, or speed of movement in going on the legs; gait; carriage and action, especially of a horse; as, putting one through his *paces*.
